THE PROBLEM

You find out a week was short when it's already gone.

10–14

DAYS

Before MI lands

By the time the figures come back, the week they're about is long gone.

0

IN-WEEK VIEW

Nothing to act on

Nothing tells you mid-week that you're behind while there's still time to do something about it.

?

AFTER TAX

A balance in hours

The bonus is a number of hours. Nobody tells you what that is in your pocket.

LOG IT

Say the day. It writes nothing until you confirm.

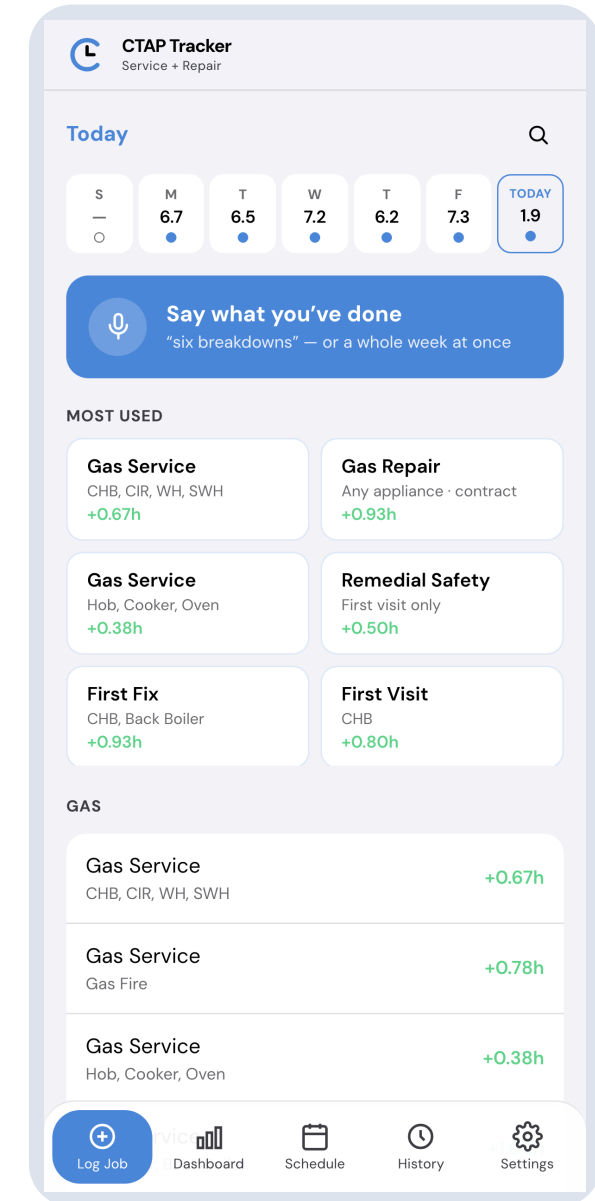

“Six breakdowns and two services.”

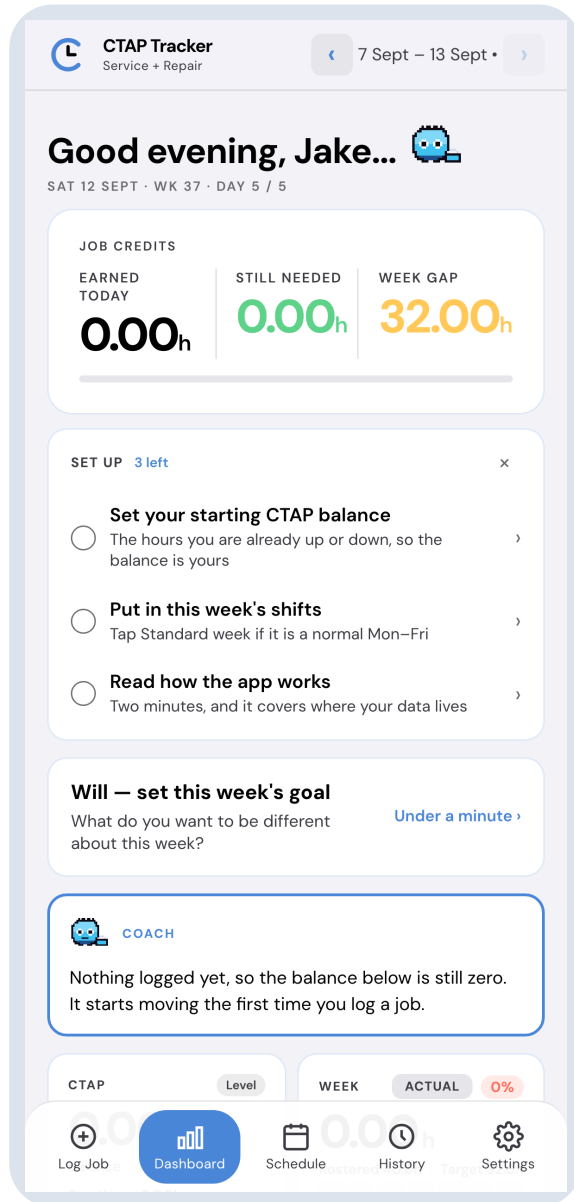

A day, said once.

“Monday six breakdowns, Tuesday three services and an inhibitor, Wednesday a long duration.”

A whole week, caught up on a Friday. Each day is read on its own and lands on the day you said.

It handles what voice does to trade numbers. “too high installs” becomes 2 × Hive install, not a job called “too high”.

SET UP

Three taps, then it gets out of the way.

1 Your starting balance

The hours you're already up or down. Without it every figure starts from zero, which is almost certainly not where you are.

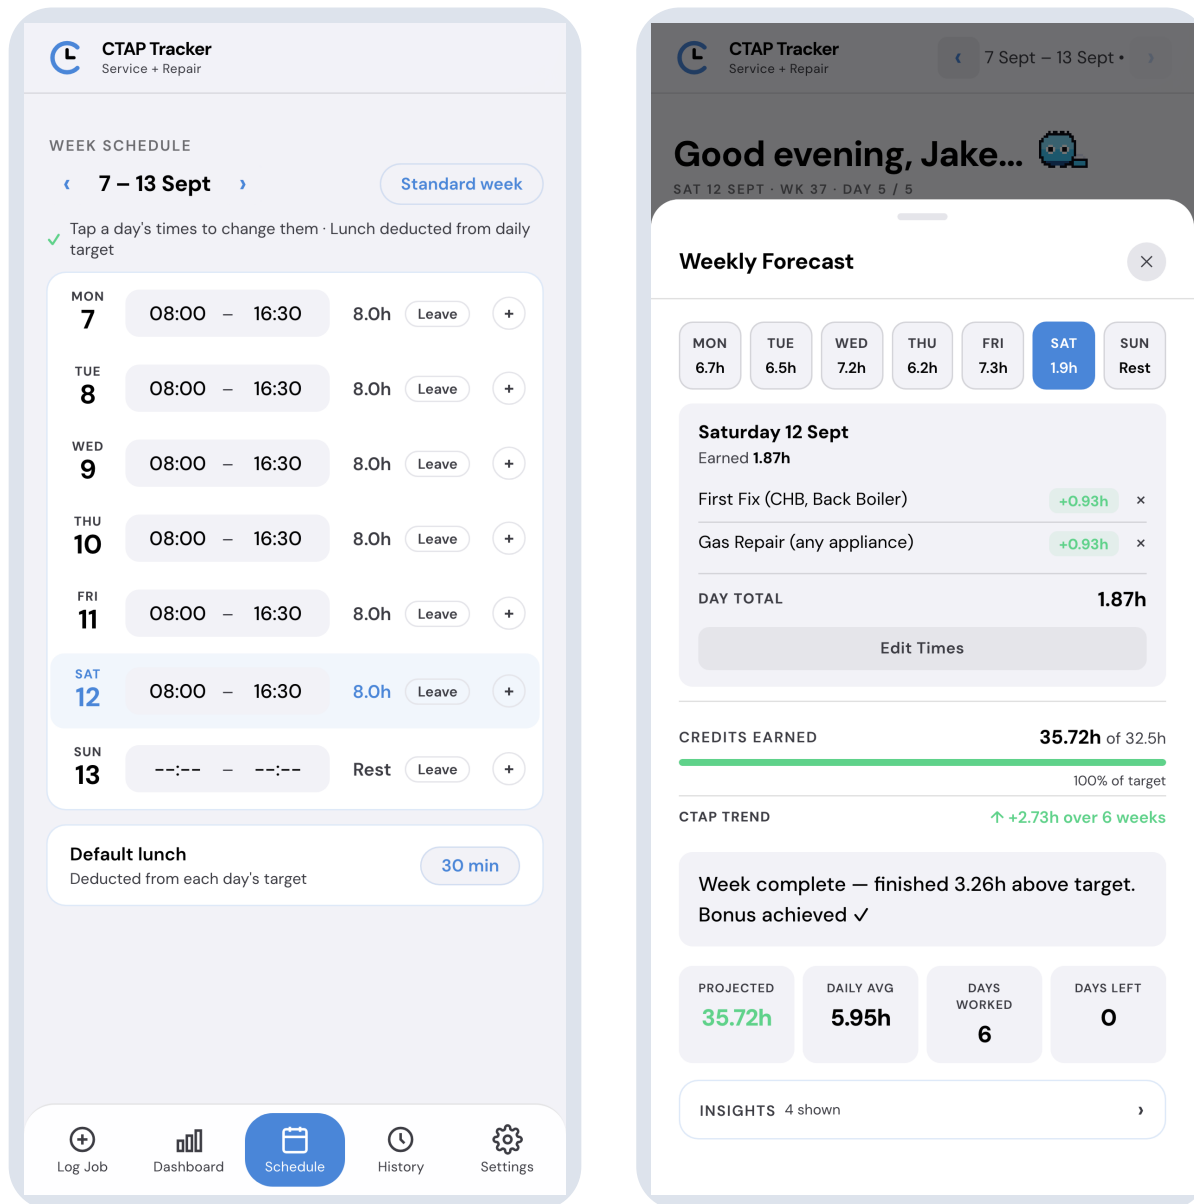

2 This week's shifts

One tap if you're a normal Mon–Fri.

3 How it works

Two minutes, covering where the data lives.

The card ticks each step off and disappears for good once they are done.

YOUR WEEK

Set the week you work, then see all of it.

- Tap a day's times, set them, Confirm
- Copy a shift to any days you choose
- No times means a rest day, not leave

The Weekly Forecast runs Monday to Sunday and opens on today. Days left counts only the days you're working, so a Friday off doesn't spread the target over an extra day.

A rest day keeps your 40 hours. It just isn't a day you're expected to earn on, unlike leave, which takes that day's hours off the week.

WHAT IT IS WORTH

Hours, converted into what reaches your bank.

WEEKLY TARGET

$40.0h \text{ rostered} \times 80\% = 32.0h$

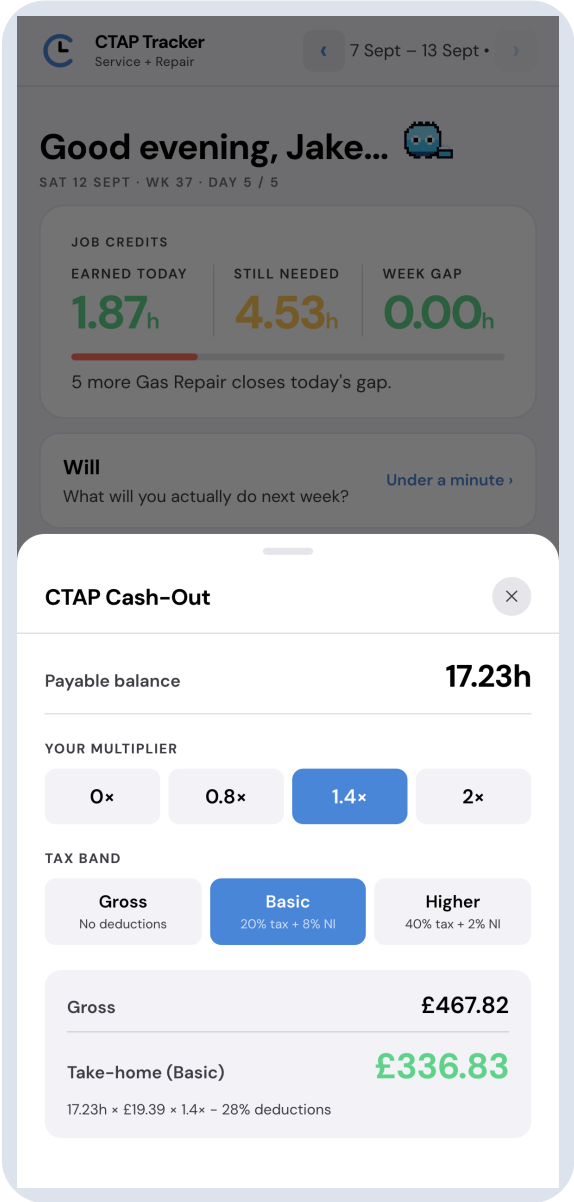

The 80% is a buffer for travel and performance factor. After four logged weeks it uses your own rolling average instead.

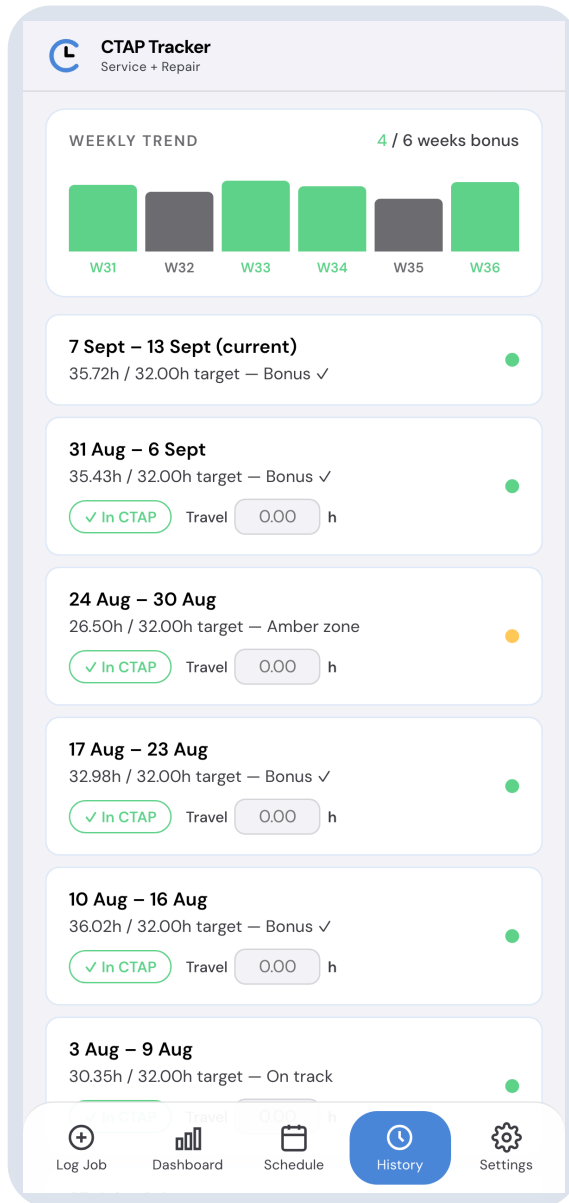

CASH-OUT

$17.23h \times £19.39 \times 1.4\times - 28\%$

£336.83 take-home

The calculation is shown under the figure in the app, so you can check it rather than take it on trust.

WHERE YOU STAND

Every week you've logged, and the balance that carries.

● Green — bonus hit

● Amber — on track

● Red — below target

Had a week that wasn't a fair test? Sickness, a phased return, a week you were still getting the hang of the app. Untick it and it stays out of your balance without being deleted.

Your balance never resets. It carries on from wherever you were already up or down, week after week.

Coach works out the way back. The check-in is your own diary.

Coach Mode

COACH

You've hit target 2 weeks in a row — great consistency.

CTAP balance: +17.23h in credit. Keep the consistency going.

Your run rate. How many jobs, or how many hours, get a deficit down, and by when. Keep going as you are today and it tells you where you'll be in ten days.

What lifts the balance most. On the visit you're already on: a Hive, an inhibitor, a CO alarm, a boiler lead. It shows what each one is worth against today's gap.

Never dispatched work. It won't suggest a service or a repair you weren't given, so it can't nudge anyone into raising work that wasn't done.

The daily check-in

Will

[Under a minute ›](#)

What will you actually do next week?

Built on GROW. Goal, Reality, Options, Will. One question a day, and it takes under a minute.

An honest diary. Where the gaps in the day were, what you're struggling with, what you'd do differently. It's there for the engineers who genuinely want to use it.

Only you can read it. No team view, no export, no comparing engineers. That's how it's built, not a setting.

YOUR DATA

Everything stays on your phone.

It’s completely secure, because there’s nothing to secure: every figure you log lives on your own phone and nowhere else. No account, no upload, no server. Nobody can see your CTAP figures but you.

ACCOUNT	None. Nothing to sign into, nothing to sign out of.
UPLOAD	None. Once it’s installed it makes no network requests at all.
SHARED WITH	Nobody. Not your manager, not me, no analytics.
OFFLINE	Works fully, which matters in plant rooms and cellars.
DELETING	Settings → Erase all data. Immediate and total.

! The one catch

There’s no backup. Delete the app, erase the data or lose the phone and it’s gone. Nobody can get it back, because nobody else ever had it.

Engineers are told this before they start.

TRIAL

Where it's up to.
