

The full guide

Every screen, and what each part does. Just want the basics? The quick start takes two minutes.

ONCE	EACH WEEK	EACH JOB	WHENEVER
Install and set up Starting balance, your shifts. Five minutes.	Set your week Shift times, leave, rest days.	Log it Tap a tile, or just say it.	See where you stand Today, the week, your balance.

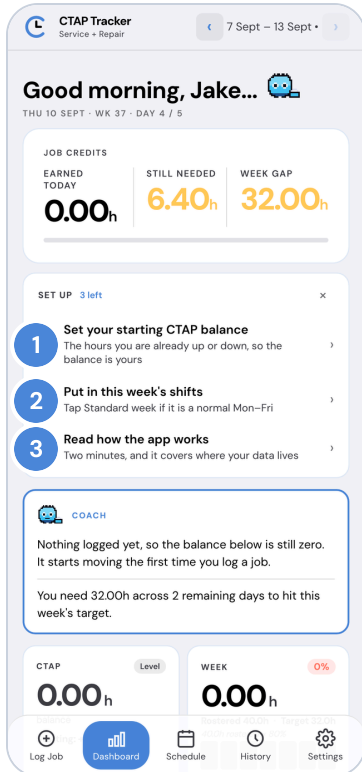

STEP 1 · ONCE

Install it on your phone

It's a web app, so there's nothing to download from the App Store. It goes on your home screen like any other app.

- 1 **Open the link in Safari.** On iPhone it has to be Safari; Chrome can't put web apps on the home screen. The link is the one I sent you.
- 2 **Tap Share, then Add to Home Screen.** The Share button is the square with the arrow at the bottom of Safari.
- 3 **From now on, open it from the icon,** not from Safari. It runs full-screen and it works with no signal, so plant rooms and cellars are fine.

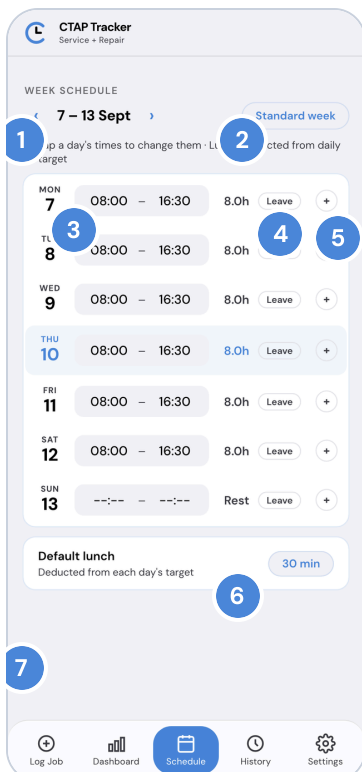

STEP 2 · ONCE

Three taps to set it up

The first time you open it, the Dashboard shows a Set up card. It ticks each one off and disappears when they're done.

- 1 **Your starting CTAP balance.** The hours you're already up or down. **This is the one that matters:** without it every figure starts from zero, which is almost certainly not where you are. If you're genuinely level, enter 0 so it knows you've answered.
- 2 **This week's shifts.** Tap **Standard week** if you're a normal Mon–Fri 08:00–16:30. Anything else, see the Schedule below.
- 3 **How the app works.** Two minutes, and it covers where your data lives (short version: on your phone and nowhere else).

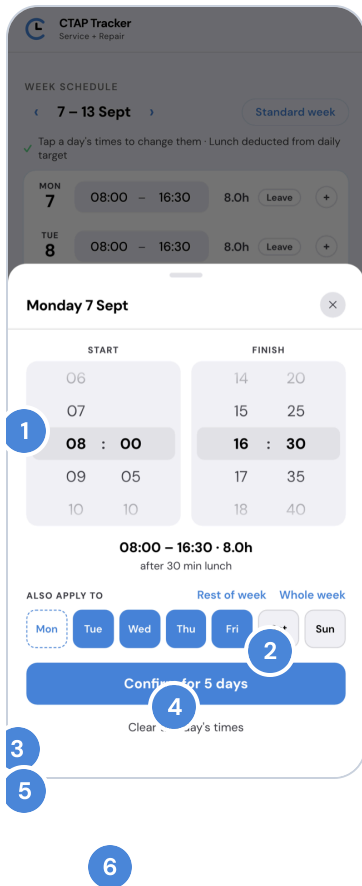

SCHEDULE TAB · EACH WEEK

Set the week you're working

This is what sets your target. Get it right and everything else falls out of it.

- 1 **Pick the week** with the arrows.
- 2 **Standard week** sets Mon–Fri 08:00–16:30 in one tap.
- 3 **A day's times.** Tap them to open the shift picker (next section), set start and finish, then Confirm.
- 4 **Leave.** Annual leave or sickness. It takes that day's hours off your week, so you're not marked down for being off.
- 5 **Day note.** Traffic, no access, training. It shows next to that day in the Forecast, so the context sits beside the numbers.
- 6 **Rest day.** A day with no times is a normal day off in your rota. Unlike Leave it doesn't reduce your hours; you just aren't expected to earn that day.
- 7 **Default lunch.** Taken off each day's target.

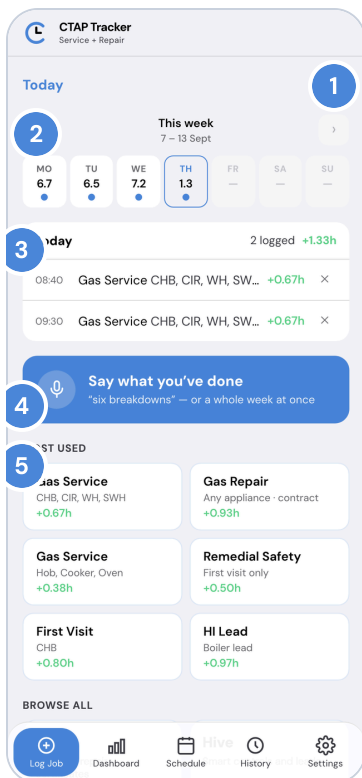

SCHEDULE TAB · TAP A DAY'S TIMES

Set one day, copy it to the rest

Weeks don't have to be Monday to Friday. Monday to Thursday and Saturday is fine.

- 1 Start and finish.** Scroll or tap the hours and minutes. Nothing is saved yet.
- 2 The shift and its hours** after lunch, so you can check it before you save.
- 3 Also apply to.** Tap any other days to give them the same times. Days on leave can't be picked.
- 4 Rest of week** picks the weekdays after this one. **Whole week** picks every day.
- 5 Confirm** saves it and tells you how many days it's setting. Close with X instead and nothing changes.
- 6 Clear this day's times** for a day you're not working. It becomes a rest day.

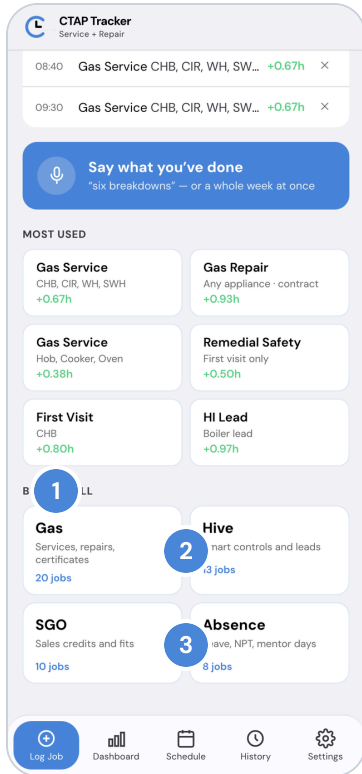

LOG JOB TAB · EACH JOB

Log a job in one tap

The app opens here. Built to be used one-handed between calls.

- 1 Search** any job by name — across every category, wherever you are.
- 2 Your week**, Monday to Sunday, with the hours credited on each day. Tap a day to log against it if you forgot one; the arrows step back to a week you've finished.
- 3 What's on that day.** Everything you've logged to it, as you log it — so you can see the tap landed, and what it landed as. The X takes one back off.
- 4 Say what you've done.** The blue bar. More on this next.
- 5 Most used.** Your six most-logged jobs. One tap logs it at its credit value.

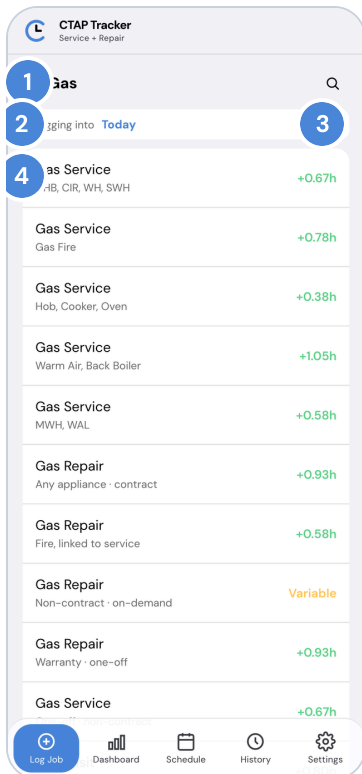

LOG JOB TAB · BELOW MOST USED

Everything else, by category

The other 45 jobs live behind four tiles, so you're not scrolling one list of 51 to find the one you want.

- 1 Browse all.** Four categories, each saying how many jobs are in it.
- 2 Gas and Hive.** Services, repairs and certificates; smart controls and leads.
- 3 SGO and Absence.** Sales credits and fits; leave, NPT and mentor days.

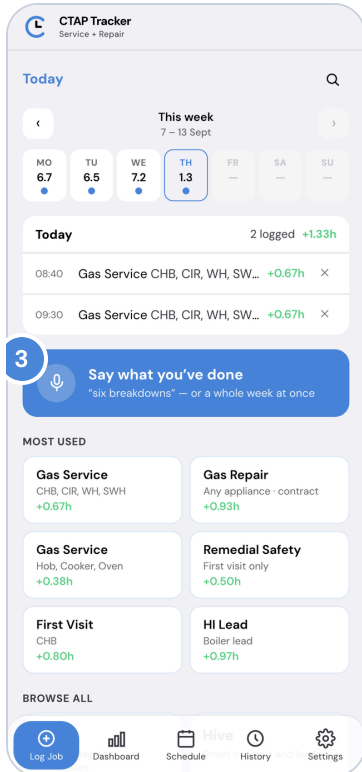

LOG JOB TAB · A CATEGORY

Tap a tile, get the list

The category takes the whole screen. Tap a job and it's logged, and you stay where you are.

- 1 Back** to the tiles.
- 2 The day this is going to.** It follows you in, so a backdated job can't land on today by mistake. Tap it to pick a different day.
- 3 Search** from here too — it still looks across all four categories.
- 4 Every job with its credit value.** The ones marked **Variable** ask for a time first: wait work, NPT, trace and repair.

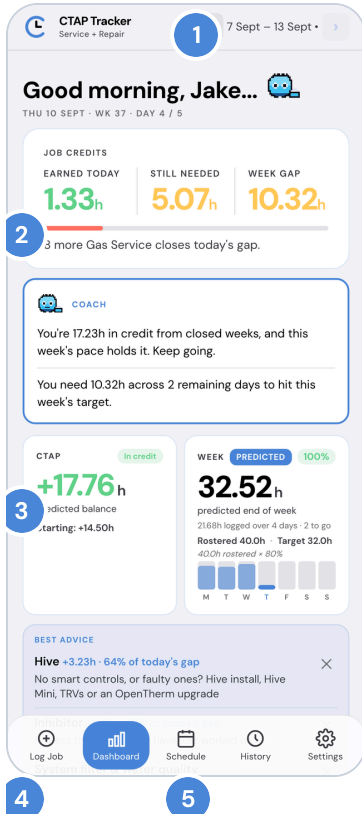

LOG JOB TAB · THE BLUE BAR

Or just say it

Tap the bar and talk. Count first, then the job: “six breakdowns and two services”.

- 1 Say the day, or the whole week.** “Monday six breakdowns, Tuesday three services and an inhibitor, Wednesday a long duration.” Each day lands on the day you said. Take your time between jobs; it waits while you think.
- 2 You get a draft, not a write.** It reads back what it heard as a list. Change a count, swap a job, or remove one. Anything it couldn't place is shown to you, not quietly dropped. **Nothing is logged until you tap Log.**
- 3 Name the appliance.** “Four boiler repairs” is exact; “four repairs” is a guess, and the draft flags it in amber so you can check. Same with Hive: say “hive mini”, “hive wired” or “hive trvs”.
- 4 Didn't catch you?** Tap the mic to start again, or **Type it instead.** Your keyboard's own microphone key works in the box too.

Speech-to-text gets trade words wrong now and then. It knows the usual ones (“bank accounts” is breakdowns, “too high installs” is two Hive installs). If it writes something daft for a job you say a lot, tell me the exact words and I'll add it.

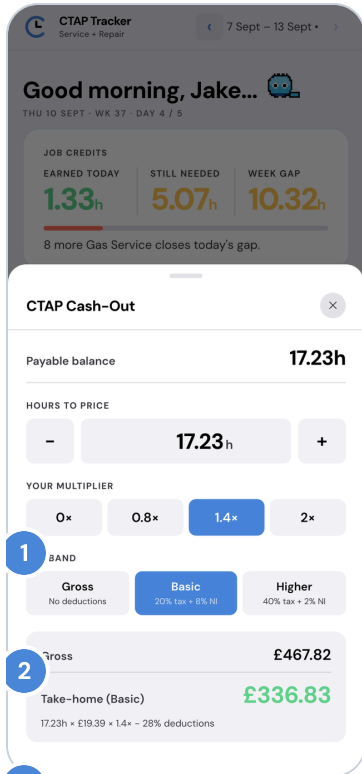

DASHBOARD TAB · WHENEVER

See where you stand today

Check it between jobs. Everything on it comes from what you've logged.

- 1 **Week switcher.** Go back to look at or fix an earlier week.
- 2 **Job credits. Earned today, still needed** to hit today's target, and the **week gap**. The bar fills towards today's target, and the line under it says what would close it. "8 more Gas Service closes today's gap."
- 3 **Coach.** Reads your own figures back: streaks, balance, what's left this week, and what the extras on a visit are worth. When it says **from closed weeks** it means the balance you've banked, not this week's prediction.
- 4 **CTAP balance.** Your credit (green) or deficit (red) in hours, starting from the balance you set. It follows the Week tile: on **Predicted** it includes where this week is heading; on **Logged** it's only what's banked from closed weeks. **Tap it** for the Cash-Out.
- 5 **Week.** Opens on **Predicted**: where your pace lands the week, with what you've logged so far underneath. "21.68h logged over 4 days · 2 to go." Tap the blue pill to switch to **Logged**, and both tiles change together. The pill disappears once the week's working days are all in. A bar for each day, and your target underneath. **Tap the tile** for the Weekly Forecast.
- 6 **Scroll down** for **Best advice** (what the extras on a visit are worth, see Coach below) and **Today's jobs**: everything logged today with its credit. Tap X to remove one, or + **Add a job** at the bottom.

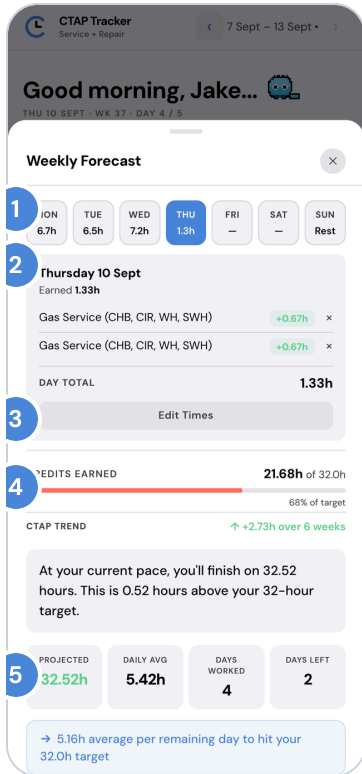

DASHBOARD · TAP THE CTAP TILE

What your balance is worth in your pocket

Slides up from the bottom. Swipe down or tap X to close.

- 1 Payable balance.** Your banked CTAP credit in hours, from closed weeks only. That's why it can differ from the predicted balance on the tile. In deficit it shows £0, because there's nothing to cash out yet.
- 2 Hours to price.** Starts on your payable balance. Type over it or tap - / + and the money moves as you go — that's how you price hours you haven't earned yet. Price a figure above your balance and it says so in amber; the Payable balance above never changes. Worth asking from a deficit: it shows what digging out is actually worth.
- 3 Your multiplier.** 0x, 0.8x, 1.4x or 2x. Pick yours.
- 4 Tax band.** Gross, Basic (20% tax + 8% NI) or Higher (40% tax + 2% NI).
- 5 Gross and take-home,** with the calculation shown underneath so you can check it. $17.23h \times £19.39 \times 1.4 - 28\% = £336.83$.

Personal estimate only. Check it against your payslip; the app doesn't see your pay.

DASHBOARD · TAP THE WEEK TILE

The week, day by day

Where the week's heading at your current pace, and what you need each day from here.

- 1 Day strip.** Monday to Sunday with each day's hours. Rest days show as Rest. Opens on today; tap any day.
- 2 That day's jobs** with the credit for each. Tap X to remove one. Any day note from the Schedule shows here too.
- 3 Edit Times.** Fix the time on a job you logged late.
- 4 Credits earned** against the week's target, and where the week landed or is heading.
- 5 Projected, daily average, days worked, days left.** Days left only counts days you're working, so leave and rest days don't thin out the target.

COACH

You're 8.40h in deficit from closed weeks. To clear it in 4 weeks, aim for +0.42h above target each day.

Your deficit reduced by 3.43h last week — you're moving in the right direction.

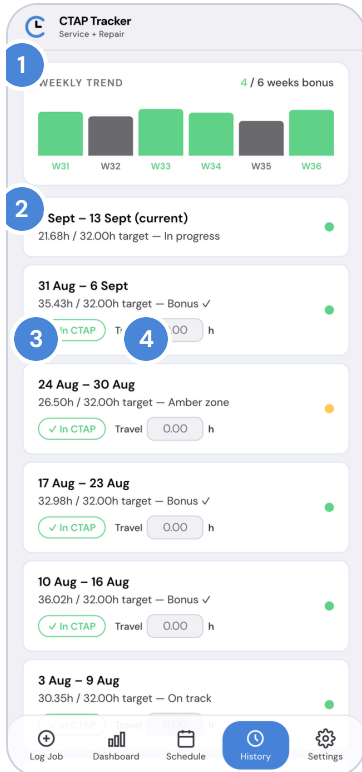

COACH MODE · ON THE DASHBOARD

Coach works out the way back

Say you've banked an 8.40h deficit from closed weeks, and it's Wednesday morning. This is what Coach does with that.

- 1 Your run rate.** It spreads the deficit over the next 20 working days, so it's a small daily top-up rather than one impossible week. $8.40h \div 20 \text{ days} = +0.42h$ a day above target. It also tells you whether last week shrank the deficit or added to it.
- 2 Today, in jobs.** Job Credits turns what's left of today's target into jobs, using the credit of the last job you logged. $2.05h$ still needed $\div 0.93h$ per Gas Repair = 3 more.
- 3 The rest of the week.** The Forecast takes your daily average so far, shows where the week finishes at that pace, and gives you the daily rate to still make target. $14.48h$ to go $\div 3$ days left = $4.83h$ a day.
- 4 What lifts the balance most.** After a service or repair it lists the best advice you could give on that visit, a Hive, an inhibitor, a CO alarm, a boiler lead, and what each is worth against today's gap.
Never dispatched work: it won't suggest a service or a repair you weren't given.

Coach only uses your own logged figures. Turn it off in Settings if you'd rather just have the numbers.

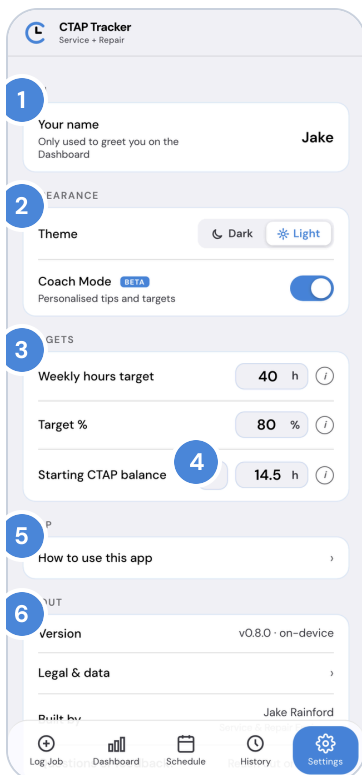

HISTORY TAB

Every week you've logged

The pattern over time, and the balance that carries from week to week.

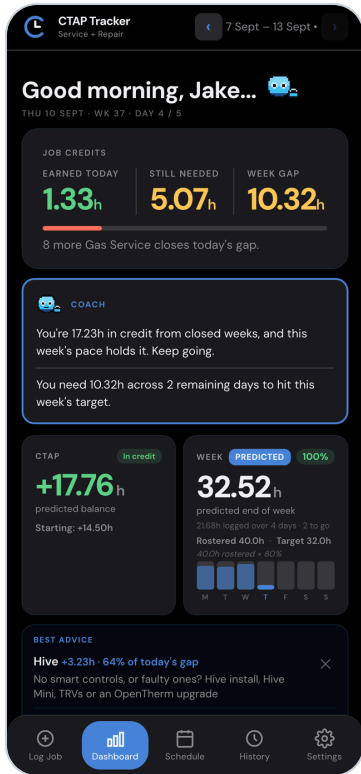

- 1 Weekly trend.** The last six weeks. Green means bonus hit. "4 / 6 weeks bonus."
- 2 Each week:** hours against target, with a dot for the result: green is bonus, amber is close, red is below. The week you're in says **In progress**, and its dot shows where it's heading, not how far through you are. Tap a week to open it.
- 3 In CTAP.** Had a week that wasn't a fair test? Long sickness, a phased return. Untick it and it stays out of your balance without being deleted.
- 4 Travel.** Note that week's travel hours. For now it's a record only; the 80% target already allows for travel.

SETTINGS TAB · ONCE

Set once, then leave it alone

- 1 Your name.** Only used for the greeting.
- 2 Appearance.** Dark or light, and the switch for Coach.
- 3 Weekly hours and Target %.** Your rostered hours and the share of them you're aiming to credit. 80% is the default; tap the **i** for why.
- 4 Starting CTAP balance.** The same one from set-up. The **+/-** button switches it between credit and deficit.
- 5 How to use this app.** A short version of this guide, built in.
- 6 On-device.** Your data stays on this phone. **Erase all data** is further down: tap Erase, type ERASE, confirm.

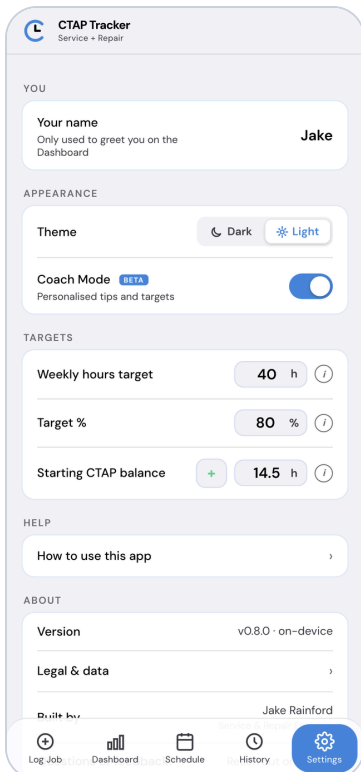

SETTINGS · APPEARANCE

Dark mode, if you'd rather

Everything in this guide is shown in light mode. The app works exactly the same in dark; only the colours change.

- 1 **Settings → Appearance → Theme.** Pick Dark or Light. It's saved on your phone, so it stays how you left it.
- 2 **Same screens, same taps.** Every step above applies either way, so nothing here needs re-reading if you switch.

BEFORE YOU START

Your figures never leave your phone

No account, no server, nothing uploaded. Not to me, not to your manager, not to anyone.

- 1 **It's completely secure because there's nothing to secure.** Once it's installed the app makes no network requests at all. Nobody can see your CTAP figures but you.
- 2 **That also means there's no backup.** Delete the app, erase the data or lose the phone and it's gone. Nobody can get it back, because nobody else ever had it.
- 3 **It's a personal tool.** The figures are estimates from what you log. Check anything that matters against your payslip and the company systems.

Don't delete the app to "reinstall" it. Deleting it deletes your data. If something looks wrong, message me first.

Stuck, or found something odd?

Get me on Teams or email and I'll sort it. If voice writes something daft, send me the exact words it showed. **Designed and created by Jake Rainford**, Service & Repair Engineer.

The screenshots use made-up demo figures. The app gives personal estimates only, so check them against official systems. Not affiliated with, endorsed by, or representative of any employer.
